DocGlasses.ai

The Physical AI Platform for Healthcare.

Building the world's first physical AI healthtech platform that turns every frontline healthcare worker into an expert.

Patent Pending · Live with Government of India · Validated in npj Digital Medicine, 2026

THE PROBLEM

90% of healthcare happens where AI can't reach.

Homes. Villages. Ambulances. Where cloud scribes fail and humanoid robots won't arrive for a decade.

424M

US home health visits per year

Source: CMS, 2020

~50M

Annual EMS dispatches in the US

Source: NEMSIS, 2023

1.5B

Community health consults in India per year

Source: NHM & Ministry of Health

THE SOLUTION

Smart glasses are the only interface that fits clinical work.

Hands-free. Always-on. First-person view. Patent pending.

Hands-Free

No typing. No tapping. The clinician stays present with the patient.

First-Person

The AI sees exactly what matters — from the clinician's point of view.

Patent Pending

Head-mounted clinical device architecture. Filed and protected.

Hardware-Agnostic

Runs on Meta, Google, Samsung & Apple glasses. Our software is the moat.

THE PLATFORM

Glasses make every medical device AI-ready.

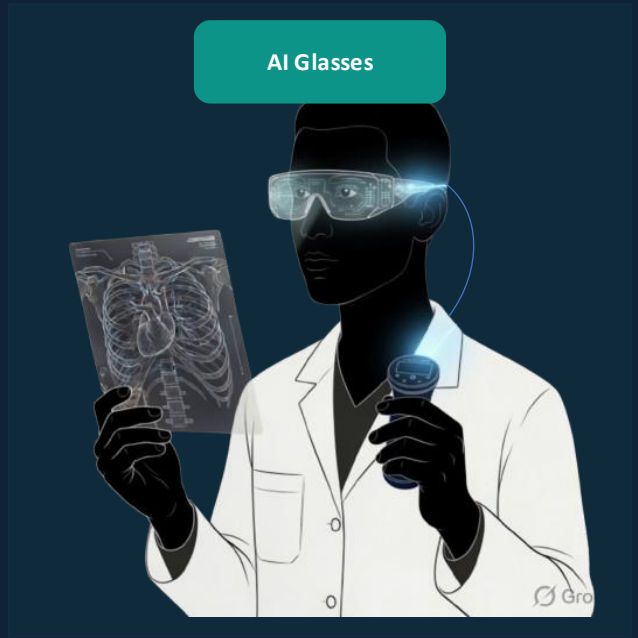
See any reading. Stream any signal. One intelligence layer across a fragmented device world.

SEE

Reads any analog or visual output

- Thermometers
- BP monitors
- Pulse oximeters
- Glucometers
- Paper reports & labs
- X-rays & ECG printouts
- Patient ID & records

reads →



← streams

STREAM

Receives live digital signals

- Bluetooth stethoscope
- Wearable ECG patches
- Continuous glucose monitors
- Streaming oximeters
- FHIR partner devices

On-device SLMs · FHIR-compliant · EHR integrations · Unified clinical intelligence layer

USE CASES

One platform. Every frontline worker.

Glasses + AI across every clinical setting where specialists can't be physically present.

US Emergency Paramedics

Cardiac, stroke, trauma guidance on-scene. ED physician sees what the paramedic sees.

US Home Care Nurses

Hands-free documentation during home visits. Notes pushed to any EHR automatically.

US Federal — VA / DoD

Military medics, VA home health. Offline-capable clinical guidance anywhere in the world.

Dermatology

Eye-level lesion capture. AI malignancy triage logged instantly.

Rural District Doctors

Real-time differential diagnosis. India, Africa, Southeast Asia — the first specialist they've ever had.

Community Health Workers

Village-level screenings captured. AI summaries reviewed by supervising clinicians.

Social & Mental Health

Trauma-informed conversation coaching. Risk flagging and session documentation.

Field → HQ Model

Field worker captures audio + video. AI generates clinical summary. HQ doctor reviews queue, prescribes in minutes. One doctor. Hundreds of cases.

THE LARGEST MARKET

The US is a category of its own.

$4.5 trillion healthcare market. $22.9B addressable for DocGlasses across frontline clinical work.

EMS / Paramedics

800K workers · **$2.6B** TAM

County-level procurement. 6-month sales cycle. Our US beachhead.

Home Health Aides

4M workers · **$8.4B** TAM

Largest US occupation. Fastest-growing segment of Medicare spending.

Federal — VA / DoD

650K workers · **$2.2B** TAM

VA alone covers 9M veterans. Single federal contract: potentially $100M+.

Social Workers + RNs

4.2M workers · **$9.7B** TAM

Community mental health and hospital nursing — expansion markets.

US strategy: Enter via EMS (fast county procurement) → expand to home health agencies → land federal contracts (VA, DoD) for $100M+ scale.

PROOF

Proof.

SCIENCE

35× more accurate than audio-only scribes.

98% Overall accuracy vs. 81% audio-only

97% Fewer omission errors (358 → 10)

97% Medication accuracy vs. 28% audio-only

Menz et al., npj Digital Medicine, 2026 · Flinders University · 100 consultations · 2,160 data points. The exact architecture Docglasses runs on.

DEPLOYMENT

First government deployment of AI glasses in public healthcare.

Docglasses is in active trial with government doctors at district clinics in India — under the SarvaDoc product brand. Trial ends November 2026. Contract signing expected Q1 2027.

DISTRIBUTION

1,500 hospitals.
12 countries.
20,000 surgeons.

Not pipeline — day-one distribution. Healthtrip's 7-year network becomes Docglasses' go-to-market across India, Middle East, and Africa.

THE TEAM

Built by founders who have exited before.

Danish Ahmed

CEO

2 exits — Yebhi (Flipkart /Walmart), Shopsity (Paytm). Founded Healthtrip.

Ashok Gautam

CTO

AI at Gaana (India's spotify) Health IoT pioneer.
CTO at Ujala. Exited to GA

Satya Misra

Strategy

Stanford. 30 years in San Francisco. Fouded Dental SaaS. Led Infosys sales

Lubna Siddiqui

Science Lead

Scientific researcher. Quantum-inspired signal algorithms.

WHY NOW

Meta · Google · Samsung · Apple all launching smart glasses in 2026 · FHIR adoption reaching critical mass · Medicare home health is the fastest-growing segment in US healthcare.

THE ASK

Raising $10M seed.

Path to **$2.5B revenue** by Year 5

24 months. Three milestones that unlock Series A.

01 Scale

→ Close India State 1 contract

→ First US EMS pilot signed

→ Activate Healthtrip distribution rails

02 Build

→ On-device SLMs for edge inference

→ FHIR-compliant EHR integrations

→ ABDM L3 acquisition complete

→ Expand device reading library

03 Unlock Series A

→ $38M+ ARR run-rate by Dec 2027

→ India States 2 & 3 signed

→ Middle East first contract

→ Patent + FDA/CE pathway

USE OF FUNDS

Tech & Product $5.1M GTM & Distribution $4.0M Operations $0.9M
